

95J Series

The 95J series is a temperature measurement sensor intended to be immersed in direct contact with liquids like water or flue gases. It has a small tip with a fast response and comes in several designs with different molded connector types and thread options. Metal or plastic designs can be developed with customized mounting features to fit various applications. UL recognized models and product customization available upon request.

Specifications

- Typical thermal time constant 1-1.8 sec. (dependent on tip configuration)
(measured: 25°C air to 85°C stirred water, 63.2% ΔT)
- Typical operating temperature range -40°C to 140°C (dependant on wire rating)
- Insulation strength 500VAC/0.5mA/2sec. (inquire for others)
- Stable performance with high degree of accuracy
- Moisture resistant

Applications

- Boiler Heating Systems
- Storage water heaters
- Other fast response in liquid applications
